*Learning for Life*

**Register Here**

[ATSHearCheck.com](http://ATSHearCheck.com)

Only \$129  
ages 8 to 25

# #DemandTheBest

## About Us

We have all heard stories about kids that are seemingly in excellent health, collapsing suddenly, only to later learn it was caused by an unknown heart condition. What many don't know is that most heart defects can be identified before something happens and most are treatable.....IF they get the proper tests.

Screening youth for heart conditions is becoming more common around the country. You may have already been approached by organizations that offer a variety of heart screening options, all with very convincing statistics. There are however, major differences that you should be aware of, and important questions you should ask when making the decision of who's program you should use for your organization. You can rely on advice from ATS HeartCheck's professionals who with the assistance of Johns Hopkins, Mayo Clinic, and UCSF Benioff Children's Hospital have developed the most respected youth heart screening programs in the country.

The ATS HeartCheck uses the most effective analytic tools to understand a heart's condition that includes Blood Pressure, electrocardiogram (EKG), and echocardiogram (heart ultrasound), all delivered by specially trained medical professionals certified in congenital and genetic heart conditions who make their living saving kids lives every day. You won't find a better screening anywhere!

## Need Another Reason?

"It is extremely hard to put into words what ATS has done for us. We had what we thought to be our completely healthy kids tested a few years ago. Much to our surprise and shock they found a large hole in Riley's heart that required surgery to repair. The surgeon told us it was good that the hole was detected because Riley was a walking stroke waiting to happen. We are forever grateful we took advantage of the opportunity and think everyone should do the same because you may never know what is going on inside your child until it's too late." -Amy Ebert

### Stats

To date, ATS has screened over 7,500 kids with 10% needing some form of follow-up. While some conditions discovered by the ATS HeartCheck are serious, not all are life threatening but have been found to cause performance issues now and into adulthood.

### Staff

ATS works with the best trained medical professionals specializing in the athletic heart. We are guided by pediatric cardiologists who review all test data and prepare a report back to the parents and primary care physician if requested.

### Special Pricing

If cost is an issue, ATS provides special pricing through affiliated non-profits. We want to ensure no family misses out on the opportunity for these potentially life-saving tests due to financial reasons.
